

ABSTRACT

Faisal, 2020, The School Of Nature Design with Emphasis on Eco-Architectural Concept in Maros. Supervisor : Dr. Ir. Andi Teddy Mappangile, M.Si., Andi Annisa Amalia, S.T., M.Si

From an early age Indonesian children must be taught religious education at school. But when you see the current condition there are still many teenagers who do negative things. This needs correction in the education system to instill noble character so that educational institutions not only teach but also educate.

In addition, educational institutions are also focused on intellectual aspects with boring methods in the classroom. Curriculum changes from year to year that aim to improve the intellectual quality of students actually pressure students to study hard. Where schools should be a pleasant place for students, so that the knowledge taught can be absorbed to the maximum. This is what drives how the realization of the ecological architecture approach will be applied in the design of natural schools that will be built.

The design of this natural school is located in Mattiro Deceng Village, Lau District, Maros Regency, South Sulawesi Province. Tread is an empty land and according to Maros Regency RTRW, this site is in a
