ABSTRACT

Electricity distribution system is important in power system because electricity acts as electricity distribution system. In distributing electrical energy there will be a ceremony that can reduce electrical energy delivered. Electrical distribution system is part of electrical voltage distribution system which is located among distribution gardu in PT. Makassar Tene. In the distribution system required a system of voltage drop and distribute electrical energy to the industry. The purpose of this study is to determine the electrical distribution system at PT. Makassar Tene, In this research method of data analysis used is descriptive analysis, that is to know distribution system with final assignment entitled "Analysis of System of electricity distribution At PT. Makassar Tene, From the results of data analysis in this study can be concluded that the electrical distribution system at PT. Makassar Tene. Electric Power System is the distribution of electric power from a source generation of electrical distribution system At PT. Makassar Tene, or the distribution of electrical power between systems.
