ABSTRACT

Service quality is an excellence level which is expected to fulfill the consumer expectation. Quality is seen based on the service indeed the service procedure point of view is seen based on the individual perception whom received the service.

The purpose of this research is not only aimed to know the service quality but also aimed to know the supporting and inhibiting factors of the public service in Kecamatan Mattoro Sompe, Kabupaten Pinrang.

Descriptive-qualitative is the research type that used in this research. The underline thing in using the descriptive-qualitative type is that the researcher means to describe the service quality of Prona in Kecamatan Mattiro Smpe, Kabupaten Pinrang where the researcher commit interview to the 10 informants. The data source consists of primary data and secondary data. Primary data obtained from the interview while secondary data obtained from record documents, official reports and archives which are supported by the completeness of the primary data.

The result of the research showed that if the required file was completed then the certificate could be quickly resolved. The clarity of the administrative requirements and the service flow could be said "good". The employee had not done best in their work, it could be seen by their attitude; friendly or not. Besides that, the Prona activities will be completed within one budget a year and the public enthusiasm in enrolling their land by Prona certificate became the most supporting factor of the public service of Prona. Whereas, the less of the surveyor staff became the most inhibiting factor of the public service of Prona.
