ABSTRACT

Musdalifa Riska, 2018. The Application of Silent Movie with Dubbing Technique in Student Speaking Skills of Class XI MA DDI Polewali, Polewali Mandar Regency, supervised by M. Ide Said D. M. and Abd. Rahman Rahim.

This study aimed to (1) know the difference of the students' speaking skills with silent movie dubbed technique application and non-silent movie dubbed technique application. (2) to know the effectiveness of silent movie with dubbing technique in the students' speaking skill of grade XI MA DDI Polewali, Polewali Mandar regency.

This research used quantitative research with quasi-experimental design. The population in this research was the students of grade XI MA DDI Polewali, Polewali Mandar regency were 47 students. Determination of the number of samples used the census method (saturated sample), where the entire population was used as the sample. Based on sampling used, the classification method was class XI IPA 1 as experimental group and XI IPA 2 as control group. Data collection techniques were performed through (1) test techniques (practice) were pre-test and post-test of speaking skills in expressing the dialogue of the characters in the drama and (2) non-test techniques including observation, interview, and documentation. The data analysis technique used were descriptive statistical technique to describe or give description of student's mastery in speech and statistical parametric differential type of Independent-Sample t-test to test hypothesis (t-test) normality and homogeneity test.

The results of this study indicated a difference between the students' speaking skills with silent movie dubbed technique application and non-silent movie dubbed technique application in grade XI students MA DDI Polewali, Polewali Mandar regency. It was proven by an analytical analysis of the t-test. From the t-test, it was known that t_{count} was 24.5 with 5% significance obtained t_{table} 2.01. The results indicated t_{count} 24.5 > t_{table} 2.01 at 5% significance which means there was a difference between the students' experimental group speaking skills with the control students. Furthermore, the difference between post-test average between experiment group and control group was $19.25 - 18.22 = 1.03$. The difference was derived from the average post-test group value. The results that shown the experiment group scores was higher than the control group, mean the students' speaking skills with the application of silent movie with dubbing techniques was more effective than the students' speaking skills without its application.
