ABSTRACT

Arini Tantu, 2022. Bugis language reference to Indonesian on the Bugis community of Soppeng regency. Thesis of Indonesian Language and Literature Education Postgraduate Program. University of Muhammadiyah Makassar. Supervised by Munirah and M.Agus.

This research objectives were to reveal the form of interference that occurs in the Bugis community of Soppeng Regency included intervention in the study of phonology, morphology, and lexical. Phonological intervention is what occurs when a bilingual produces a sound of the second language system at the sound of the first language system. Morphological intervention is interference that occurs in the process of word formation or affix. Lexical intervention is interpreted as the confusion of vocabulary between one language into another language. In addition to the interference in linguistic studies in this study also compares the interference that occurs in formal and informal environments.

This research was qualitative descriptive research with data retrieval methods in the form of listening techniques which capable. This technique was based on the tapping method. Data collection process was carried out by listening, recording then recording the communication process carried by the subject so that the data obtained was more accurate.

The results of this study showed the form of phonological intervention in the form of subtle of phonemes / h / , / k / and / t / , changes of phonemes / t / to / nd / , addition of phonemes / i / , / e / , and / ng / , and changes in sound [f] to [p] and [v] to [p]. Morphological interposition in the process of affixation were prefixes (ma-), (pa-) and (ta-) and suffixes (-mi), (-ji), and (-ki). Lexical intervention in the form of combining the application of vocabulary between Bugis and Indonesian language vocabulary.

Keywords: *intervention, Bugis Language, Phonology, Morphology, Lexical*.
