

## ABSTRAK

**Nurfadillah Syukri. 105961109720.** Analisis Risiko Produksi dan Pendapatan Petani Kakao di Desa Mamampang Kecamatan Tombolopao Kabupaten Gowa Dibimbing oleh **Hj. Nailah** dan **Firmansyah**.

Penelitian ini bertujuan menganalisis pendapatan petani kakao serta risiko produksi dan pendapatan yang dihadapi petani kakao di Desa Mamampang Kecamatan Tombolopao Kabupaten Gowa.

Populasi dalam penelitian ini yaitu 268 orang dan teknik penentuan sampel, menggunakan teknik *simple random sampling* sehingga diperoleh sebanyak 40 orang petani kakao di Desa Mamampang Kecamatan Tombolopao Kabupaten Gowa. Analisis data yang digunakan yaitu analisis Pendapatan dan analisis Koefisien Variasi (CV)

Hasil penelitian menunjukkan bahwa rata-rata pendapatan petani kakao selama satu tahun di Desa Mamampang Kecamatan Tombolopao Kabupaten Gowa sebesar Rp 2.566.084/Tahun. Pendapatan tersebut merupakan keuntungan bersih yang didapatkan oleh petani kakao dari selisih biaya pengeluaran dan penerimaan. Nilai CV risiko produksi yaitu 0,11 yang tergolong berisiko rendah. Sedangkan Nilai CV risiko pendapatan yaitu sebesar 0,12 yang tergolong risiko rendah. Risiko risiko yang dihadapi yaitu serangan hama dan penyakit, kondisi cuaca, dan fluktuasi harga.

Kata Kunci : *Kakao, Produksi, Pendapatan, Risiko*

## ***ABSTRACT***

**Nurfadillah Syukri. 105961109720.** *Analysis of Production Risk and Income of Cocoa Farmers in Mamampang Village, Tombolopao District, Gowa Regency, Supervised by Hj. Nailah and Firmansyah.*

*This research aims to analyze cocoa farming income as well as production and income risks faced by cocoa farmers in Mamampang Village, Tombolopao District, Gowa Regency.*

*The population in this study was 268 people and the sampling technique used a simple random sampling technique so that 40 cocoa farmers were obtained in Mamampang Village, Tombolopao District, Gowa Regency. The data analysis used is income analysis and Coefficient of Variation (CV) analysis*

*The results of the research show that the average income of cocoa farmers for one year in Mamampang Village, Tuncioopao District, Gowa Regency is IDR 2,566,084/year. This income is the net profit obtained by cocoa farmers from the difference in expenditure and revenue costs. The CV value of production risk is 0.11 which is classified as low risk. Meanwhile, the CV value of income risk is 0.12, which is classified as low risk. The risks faced are pest and disease attacks, weather conditions, and price fluctuations.*

*Keywords :Cocoa, Produktion, Income, Riks*
