“THE CORRELATION BETWEEN KNOWLEDGE SHARING AND THE IMPLEMENTATION OF A PATIENT SAFETY CULTURE AT UNISMUH MEDICAL CENTRE CLINIC IN 2023”

ABSTRACT

Background : Primary health care is the first place where patients come into contact with the health system and is widely used by the population. However, reports of patient safety incidents are very limited and there is not much research on the use of patients' safety in primary health care. The phenomenon that occurs in the primary health care facility is called the iceberg phenomena. The occurrence of patients' safety incidents in primary care is caused by a culture of patient safety that has not been widely applied. To enhance a culture of patient safety, one of the ways that can be developed is the process of knowledge sharing..

Objective: To identify the relationship of knowledge sharing on the implementation of patient safety culture at Unismuh Medical Centre Clinic 2023..

Method: This study adopts a mixed-method sequential explanatory design with a cross-sectional framework. It involves 16 respondents for the quantitative data and 3 respondents for the qualitative data.

Results: The study's findings, derived from statistical testing using the Spearman Rank correlation test, resulted in a p value of 0.716. It can be concluded that there is no correlation between knowledge sharing and patient safety culture..

Conclusion: There was no significant relationship between knowledge sharing and patient safety culture at Unismuh Medical centre clinic 2023

Key words: Knowledge Sharing, Patient Safety Culture, Keselamatan Pasien

***HUBUNGAN KNOWLEDGE SHARING TERHADAP PENERAPAN
BUDAYA KESELAMATAN PASIEN DI KLINIK UNISMUH MEDICAL
CENTRE 2023”***

ABSTRAK

Latar belakang : Pelayanan kesehatan primer adalah tempat pertama pasien berhubungan dengan sistem kesehatan dan banyak digunakan oleh populasi. Namun, laporan kejadian keselamatan pasien sangat terbatas dan penelitian belum banyak tentang penggunaan keselamatan pasien di layanan kesehatan primer. Fenomena yang terjadi di fasilitas kesehatan primer disebut sebagai fenomena gunung es. Terjadinya insiden keselamatan pasien di perawatan primer salah satunya diakibatkan oleh budaya keselamatan pasien yang belum diterapkan sedara luas. Untuk meningkatkan budaya keselamatan pasien, salah satu cara yang dapat dikembangkan adalah proses berbagi pengetahuan atau *knowledge sharing*.

Tujuan : Untuk mengidentifikasi hubungan *knowledge sharing* terhadap penerapan budaya keselamatan pasien di Klinik Unismuh Medical Centre 2023.

Metode : Penelitian ini menggunakan metode campuran tipe *sequential explanatory design* dengan rancangan *cross sectional*. Sebanyak 16 responden untuk data kuantitatif dan 3 responden untuk data kualitatif.

Hasil : Hasil penelitian berdasarkan uji statistik menggunakan uji korelasi *Rank Spearman* diperoleh p value = 0,716, maka dapat disimpulkan tidak ada hubungan antara *knowledge sharing* dengan budaya keselamatan pasien.

Kesimpulan : Tidak terdapat hubungan antara *knowledge sharing* terhadap penerapan budaya keselamatan pasien di Klinik Unismuh Medical Centre 2023.

Kata kunci : *Knowledge Sharing*, Budaya Keselamatan Pasien, Keselamatan Pasien
