

SPEECH

PRESIDENT AHMADINEJAD SPEECH CONTENT IN IRAN IN A NUCLEAR IRAN Conference 4/18/2010

I am grateful to God Almighty who has given me the opportunity to dialogue about one of the most important problems of the world.

I thank the noble guests who come from different countries and I hope this effort will produce useful results.

The theme of this conference is very significant and if realized would be the guarantor of the establishment of sustainable security and peace for all parties.

Dear colleagues! You know very well that security is the main foundation of the noble life and mukaddimah important for the progress and prosperity of the world. Peace and security are the demands of all peoples and nations are free and who want peace. Without the continuous safety and security, there may not be a comprehensive program for the advancement and welfare. Today, although many sources in many countries is spent on ensuring national security rather than welfare, no visible signs of recovery and reduction of atmospheric threats.

Security Council and the United Nations as well for more than 60 years old are not able to achieve lasting security and a sense of security in international relations. Even when the condition is worse and more inkondusif than decades ago. War, aggression, occupation, and the more powerful the shadow of the more significant hazards and stockpiling of nuclear weapons and mass destruction, and an even worse political imperialist countries that make national security, regional, and international, it is not clear to the whole country and the nation, and world public opinion today is affected by the feelings of fear and threat. The slogan of nuclear disarmament has not been realized and the International Atomic Energy

Agency (IAEA) did not succeed in carrying out their duties. Warehouses nuclear, chemical, and biological, daily increasing, and expanding arms race.

What is the real cause?

I think the reason must be sought in politics and policies of some countries partially greedy and arrogant that I will mention:

1. Politics of production and use of Nuclear Weapons

The first nuclear weapon was first manufactured and used by the United States. Anti-humanitarian action is outwardly demonstrated the superiority of the United States and its allies in World War II, but actually become the main driving factor and the expansion of nuclear weapons by others. The production of nuclear weapons in a state itself becomes a reason and the factors that the proliferation of weapons by another country.

2. Use of Nuclear Weapons As Means of Defense.

Politics is a major factor given the expansion of competition defense weaponry demanding excellence both in quality and capacity of the weapon and it is increasingly fueled competition of nuclear weapons. You know that today there are more than 20 thousand nuclear warheads in the world that around half of whom are in the storehouses of the 2500 United States include strategic nuclear warheads that threaten life on earth.

Parties to the United States also forced competitors to expand nuclear weapons on the grounds of defense.

3. Threat of Use of Nuclear Weapons in International Relations.

It is unfortunate that once a government of the United States have used atomic weapons and officially threatened to use against another country. A

few years ago the European countries also repeated the threat. When the owners and threatening, and users of nuclear weapons, has a veto on the security of the world's highest institution, does this not mean provocation of other countries to produce nuclear weapons for national security?

4. Manipulated the Security Council and IAEA.

Too bad attitude is disgraceful and unjust because it often turns into a process repeated. The Security Council was clearly manipulated politics and arrogant some countries up to now not able to keep the rights and security of nations. Justification to attack Iraq and Afghanistan, their behavior in the era of Saddam's aggression related to Iran and the Palestinian problem, prove it all.

Instead of disarming its nuclear weapons as a manifestation of the philosophy of existence, and assistance to member countries to utilize nuclear program in proportion and in the interest of peace based on the fourth item, it becomes a means to pressure the countries that do not have nuclear weapons and prevent their legal rights in civilian nuclear technology to utilize.

Until now none of the non-nuclear NPT members can utilize nuclear energy for peaceful purposes without easily bear the pressure and threats. In fact, according to the grain into the 6th NPT, until now there has been no single report of a team of investigators of the International Atomic Energy Agency on nuclear installations America and its allies. Nor is there a program that was ratified in order to disarm their nuclear weapons. Instead, the owner of the nuclear states to keep pressing member states of non-nuclear with various reason, removing dozens of resolutions.

5. Double Standards Policy

Today the Zionist regime of Israel has kept more than 200 nuclear warheads, triggering a large and constantly threatening war nation and the Middle Eastern country with terror and military attacks, turned out to have the full support of

But the question is whether the important issues to the disarmament and prohibition of the spread of nuclear weapons to countries in possession of this weapon is the correct method?

Follow-up of this method for 60 years and then in turn it upside down. Waiting voluntary steps from countries in possession of nuclear weapons is an illogical expectation and too naive. Because nuclear weapons is their superiority factor from other states.

There is a peribahasa Iran that says, "The knife is not going to hurt himself". Anticipation of the creation of the security of the owners veto power and the biggest arms dealers in the world is waiting really is not logical.

Dear father and mother ...

For the realization of human goals matter of disarmament and prohibition of the spread of nuclear weapons, I propose the following five points:

1. The establishment of an international independent group whose job program and oversee disarmament and prohibition of nuclear weapons proliferation with the absolute authority of the UN General Assembly. This group will work with the participation of all state and independent nation.
2. Suspension of membership countries owners, users and threatening with nuclear weapons at the International Atomic Energy Agency (IAEA) and the IAEA Board of Governors.

Until now participation, pressure and their authority over the IAEA to be a barrier it has conducted its obligations, particularly related to grain-4 and 6 which led to IAEA deviate from his duty. Moreover the U.S. government to use weapons that are produced from nuclear waste in the Iraq war that resulted in the spread of

diseases that are difficult to cure should not be a member of the IAEA Board of Governors.

3. A review of the NPT.

This review should be conducted by independent states and non-nuclear. Participation of countries in possession of nuclear weapons, primarily American countries would be an obstacle drafting a contract and a fair deal. America itself is the state defendants in the matter of production, dissemination and use of nuclear weapons is unjust. America must not claim that this agreement must be perfect, fair and firm that has a high effectiveness.

4. All should try to improve the UN Security Council. The structure of the existing UN Security Council today is very unfair and ineffective, even a major factor supporting the owners of nuclear weapons. Here, the veto is not fair, humane and democracy should be canceled or if there are those who insist that the right of this tyrant set, in order to reduce its negative impacts, then other countries from Latin America, Europe and Asia should also have the right to veto . Thus, there is still a glimmer of confidence in the UN Security Council.

5. The work team should be formed.

Islamic Republic of Iran as a country that is able to nationalize peaceful nuclear technology is ready to transfer technology to the countries with the supervision of IAEA member of this institution. Iran as the country most committed co-operation with the IAEA and implement all its commitments, not only did not get help and cooperation from member states and the IAEA IAEA owner of the technology itself, but it is not fair in the most severe pressure. Nevertheless, Iran has a strong conviction about the necessity for global nuclear disarmament to actively participate in managing the world of nuclear disarmament and develop new agreements as well as continue its cooperation with the IAEA within the framework of the law.

America and its allies. Zionist Israel actually received funding to develop nuclear weapons. Uniquely, these countries also associated with various reasons lie peaceful nuclear activities of other countries and without strong based on a document, instead applying heavy pressure and psychological warfare against the IAEA member states. When its double standard policy justifies them by lightly saying that the Zionist regime of Israel is not a member of the IAEA.

Does this not mean encouraging other countries out of the IAEA and suspend commitments about the ban on the expansion of nuclear weapons?!

6. Equation with the Nuclear Energy Nuclear Weapons

You all know how much nuclear energy is the cleanest and cheapest energy. Global warming and air pollution produced by fossil fuels and can not be updated to make more urgent the development and utilization of nuclear energy. In addition, nuclear technology is very useful in producing pharmaceuticals, detection and treatment of diseases difficult to cure, in the agriculture industry as well as in many other fields.

The betrayal of the nation's largest nuclear-weapon states is equating nuclear weapons with nuclear energy. In principle, there are significant differences related to weapon production lines and lane utilization of nuclear energy. They know very well about this problem. But they want the weapons and nuclear energy in their monopoly to impose its will on the international community.

Is this behavior instead of setting up facilities for the development and production of nuclear weapons?

Everything became clear that the production, diversion of nuclear weapons and the political pressures played by countries in possession of nuclear weapons became a major factor driving instablitas and nuclear weapons development. Destruction of nuclear weapons and eliminate the nuclear threat is greatest in creating a sustainable security, peace and friendship.

Dear father and mother ...

In front of you, I want to convey a number of sentences to officials of the United States and its allies. They must know that the period is based on the nuclear bomb has ended. Threats with a weapon, especially with nuclear weapons is only done by people who do not have a clear logic and human thinking. Using the logic of how strong the threat associated with the past and now it is not effective in international relations.

The threat to use nuclear weapons will only be embarrassing to American officials and uncover the inhumane policies and their expansive. Now is the period of the nations, thought and culture. Relying on the weapon in international relations is the heritage of the countries uncultured and backward. Control of Middle East policy, energy and cheap energy sources have proven false. Imperatur establish a new dream has shattered and can not be predicted anymore.

Rather than continue the path of those who passed away who had joined the dustbin of history. it is better to join with all nations and independent states, civilized and humane logic. It would be better and more beneficial for them. The future belongs to the nations. Security, peace and justice around the world will be created with the help of the righteous and perfect human being. At that time there was no place for arrogant people.

With the cooperation, partnership and solidarity with the hope this would create a "Nuclear Energy for All, Nuclear Weapons Not For Everyone".

Wassalamualaikum Warahmatullahi wabarakatuh
