## **ABSTRACT**

This research is motivated by the fact that the level of community participation in flood disaster mitigation in West Rasana'e District is still relatively low. *This research aims to: 1) Determine the level of community participation in flood disaster mitigation efforts in West Rasana'e District, Bima City. 2) Determine the obstacles faced by the community in participating in flood disaster mitigation efforts in West Rasana'e District. The research method used quantitative descriptive sampling. The sampling technique used purposive sampling. Data collection techniques used questionnaires, interviews, and documentation. Data analysis techniques used were descriptive analysis and Likert scale analysis. The results of the study indicate: 1) The level of community participation and awareness in flood disaster mitigation efforts in West Rasana'e District is quite high. The community has played an active role in activities such as mutual cooperation, cleaning water channels, and planting trees. 2) The main obstacles faced by the community include a lack of knowledge about mitigation, economic activity, minimal supporting facilities, and a lack of coordination with the government.*
