

ABSTRAK

Lukmanul Hakim, 2022. Dampak menyempitnya lahan tangkapan ikan terhadap pendapatan nelayan di Kawasan Danau Tempe kabupaten wajo (Studi Kasus Mahasiswa Fakultas Ekonomi dan Bisnis Universitas Muhammadiyah Makassar Angkatan 2017). Skripsi Program Studi Manajemen Fakultas Ekonomi dan Bisnis Universitas Muhammadiyah Makassar. Dibimbing oleh Pembimbing I Agusdiwana Suarni dan pembimbing II Muhammad Nur Abdi

Penelitian dilakukan di kabupaten wajo yang berlokasi pada 4 kecamatan; kecamatan sabbangparu, kecamatan tempe, kecamatan tanasitolo dan kecamatan belawa. Penelitian ini dilaksanakan pada bulan mei sampai dengan juli 2022, tujuan penelitian dilakukan untuk mengetahui dampak penyempitan lahan tangkapan ikan terhadap pendapatan nelayan di kawasan Danau Tempe kabupaten wajo. Penentuan informan menggunakan munggunakan metode multiple cluster sampling penentuan berdasarkan karakteristik dan kondisi geografis wilayah yang hampir sama. Teknik pengumpulan data yang digunakan adalah wawancara, observasi, dan studi Pustaka. Hasil penelitian menunjukkan adanya penyempitan lahan tangkapan di akibatkan oleh beberapa faktor yakni dari laju sedimentasi dan tumbuhan air yang meluas. Rata-rata pendapatan nelayan sebesar RP 12,863,877 pertahun.

Kata Kunci : Danau Tempe, pemyempitan lahan, pendapatan

ABSTRACT

Lukmanul Hakim, 2022. The impact of narrowing fish catchment land on fishermen's income in the tempe lake area of Wajo Regency (Case Study of Students of the Faculty of Economics and Business, University of Muhammadiyah Makassar Class of 2017). Thesis of Management Study Program, Faculty of Economics and Business, University of Muhammadiyah Makassar. Guided by Supervisor I Agusdiwana Suarni and supervisor II Muhammad Nur Abdi

The study was conducted in wajo district located in 4 sub-districts; Sabbangparu Subdistrict, Tempe District, Tanasitolo District and Belawa District. This research was carried out from May to July 2022, the purpose of the study was to determine the impact of narrowing fish catchment land on fishermen's income in the tempe lake area of Wajo regency. The determination of informants using the multiple cluster sampling method is based on the characteristics and geographical conditions of almost the same area. The data collection techniques used are interviews, observations, and literature studies. The results showed that the narrowing of the catchment land was caused by several factors, namely from the rate of sedimentation and widespread aquatic plants. The average income of fishermen is RP 12,863,877 per year.
